

GP Autumn Seminar 18th September 2015

Focus Group:Pre-registration Trainee Pharmacists

Clinical Pharmacist in General Practice Pilot

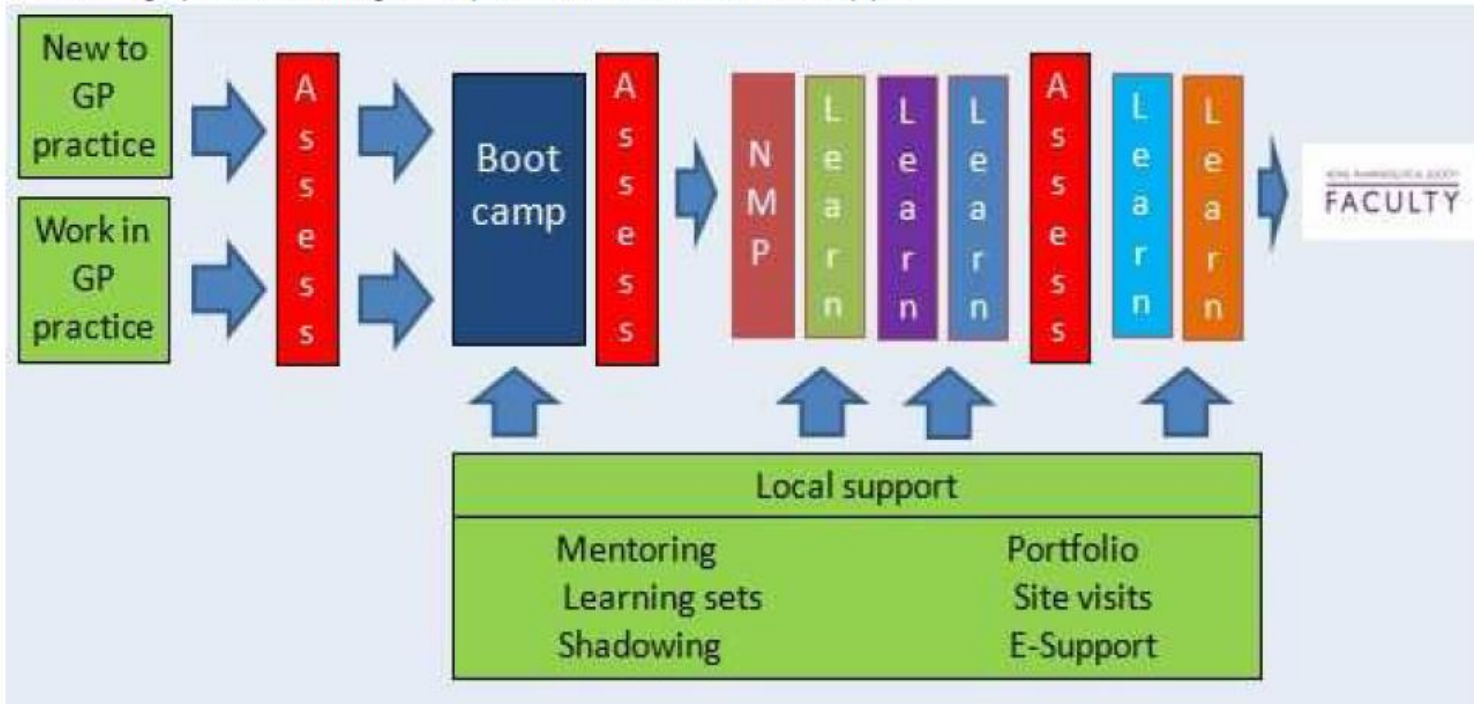

Centre for Pharmacy Post Graduate Education (CPPE)

18 Month Training Programme

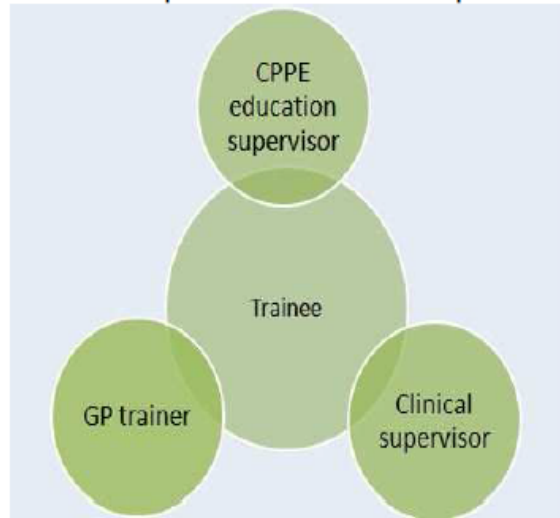

Learning pathway

CPPE is working with NHS England and Health Education England as a delivery partner to provide the training pathway. Residential study courses, study days, small group learning sets and self-directed study will all contribute to the pathway provision. Education will be delivered by online methods and face-to-face to encourage peer support. Clinical pharmacist trainees will be supported for the duration of the pathway by mentoring, peer learning and personal educational support.

Support

A strong support structure underpins the pathway. Support will be delivered by an educational supervisor, clinical supervisor and workplace based GP trainer.

The education supervisor will ensure that each trainee experiences an effective learning experience throughout the pathway. The education supervisor will achieve this by working with trainees to identify learning and development needs and give effective feedback. The education supervisor will facilitate learning events and use appraisal with coaching support to enable progression through the 18 month pathway.
