

Introduction

In the Summer of 2019 the RCGP reviewed and updated the RCGP curriculum to meet the learning needs of the GP in practice. This resource has been compiled to help GP trainees both be aware of the learning areas (topics) and provide some resources that would help gain information pertinent to the common and important conditions that are expected to be known. It is hoped that it will help focus learning and assist the trainee to quickly identify areas of weakness guidelines and trusted resources to gain the necessary information quickly.

In return for being given access we ask that if you find a link not working or a better resource that you make the office aware asap. The topics will be reviewed annually to ensure the resources are comprehensive.

Dr Cathryn Ruddock

TPD Norfolk - Norwich

The Life Stages Topic

Children and Young People
People with Long-term Conditions including Cancer
